This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to FIL CDNA.

The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes for further information about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TATATATAAAAAAAAAAAAAAAAAAAAAAAAAAAAA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lawrence Berkeley National Laboratory, One Cyclotron Berkeley, CA 94720, USA Sequence submitted by:

                                                                         hyperplasia, Cushing's disease, endometriosis, infertility, hypergonadal disorders, and gynaecomastia. Eye disorders include conjunctivitis, keratitis, glaucoma and macular degeneration, and metabolic disorders include diabetes, cystic fibrosis, goitre, hypercholesterolaemia, hypoglycaemia, hyperlipidaemia, lysosomal storage diseases, obesity, phenylketonuria and hypocalcaemia. Also the molecules are useful for treating gastrointestinal disorders such as dysphagia, gastritis, peptic ulcer, cholelithiasis, cirrhosis, hepatitis, hyperbilitribinaemia, constipation, diarrhoea, jaundice, Wilson's disease, thrombosis and hepatic tumours. The DME polypeptide is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Walia NK,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence encodes a novel maize starch-associated protein that occurs both bound to starch grains and in soluble form in plant cells. Such a protein can be used to produce transgenic plants or plant cells which are capable of synthesising modified starch.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding maize starch-associated protein in potatoes corresponding protein, vectors, transgenic plants, antibo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This specification describes potato and maize starch-associated proteins that occur both bound to starch grains and in soluble form in plant cells. Such a protein can be used to produce transgenic plants or plant cells which are capable of synthesising modified starch.

NOTE: This sequence is not described or represented in the specification but is presented in the sequence listing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC least 18 bases in length of a segment of chemically pretreated DNA (II) CO of genes associated with development selected from 87 genes listed in CC the specification such as ACCPN, ADPN, or AFD1 and comprising one of 350 CC sequences (ABN/9984-ABN80333) or their complements. The invention is CC useful for the diagnosis or therapy of diseases associated with CC development genes, in particular disease, related to homeobox containing CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes CC associated with congenital heart disease, epilepsy, diseases related to combistion deacetylation, Currarino syndrome, diseases related to CC distone deacetylation, Currarino syndrome, diseases related with the CC Oligomers specific to each of the genes are useful for detecting the CC oligomers specific to each of the genes are useful for detecting the CC (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, ill) and/or their complements and CC as oligomer probes for detecting the cycosine methylation state and/or Single nucleotide polymorphisms (SNPs).

CC Note: The sequence data for this patent did not form part of the printed CC specification but is based on sequence information supplied to berwent by CC the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                        01-SEP-2001; 2001WO-EP10074.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not specification, but was obtained in electronic for at ftp.wipo.int/pub/published_pct_sequences.

This invention describes a novel method for determining the degree methylation of a particular cytosine in a motif 5'-CpG-3', present genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the gent DNA that contains the target C is amplified to form a labeled ampli

member, of oligonuclear and/or peptide-nucleic acid (PNA) oligomers can determine the amplicon. From the ratio of labels hybridised to the two classes of oligoners, the degree of methylation is calculated. The method cisses of oligoners, the degree of methylation is calculated. The method cis used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Cabolishop the degree of cytosine methylation described in the cutoff of determining the degree of cytosine methylation described in cross the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of therapautic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (1) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                 Tang YT,

The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in the specification such as ACCDN, ADDN, or AFD1 and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is useful for the diagnosis or therapy of diseases associated with
                                                                                                                                                                                                                                               Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes ass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-JUN-2000; 2000DE-1032529.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1250
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            development genes, in particular disease related to homeobox containing genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes associated with congenital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related with the development of the brain and limb girdle muscular dystrophy and dwarfism. Oligomers specific to each of the genes are useful for detecting the methylation state of all CpG dinucleotides within the 350 sequences or (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, as primer oligonucleotides and as oligomer probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs).

Note: The sequence data for this patent did not form part of the printed specification but it based on sequence information supplied to Derwent by
                                                                                                                                                                                                                                                                                                                                                                                     30-JUN-2000;

The present invention provides a number of human immune system associa genes which are modified by the methylation of cytosines. The sequence can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid

immune system associated ytosines. The sequences

                                                     The invention relates to a nucleic acid (I) comprising a sequence at CC least 18 bases in length of a segment of chemically pretreated DNA (II) CC of genes associated with development selected from 87 genes listed in CC the specification such as ACCPN, ADRN, or AFDI and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is CC useful for the diagnosis or therapy of diseases associated with CC development genes, in particular disease related to homeobox containing CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes associated with congenital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related to CC dispomers specific to each of the genes are useful for detecting the CC oligomers specific to each of the genes are useful for detecting the methylation state of all CpG dinucleotides within the 350 sequences or CC (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, (II) and/or their complements and CC single nucleotide polymorphisms (SNPs).

CC Note: The sequence data for this patent did not form part of the printed specification but is based on sequence information supplied to Derwent by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; development; nowecome, year, methylation; heart disease; epilepsy; histone deacetylation; dwarfism; single nucleotide polymorphism; SNP; cantidiabetic; cytostatic; anticonvulsant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1044
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human chemically modified disease associated gene

New nucleic acids or oligomers, useful for diagnosing or treating diseases associated with DNA transcription, e.g. immunological disorders, Werner syndrome, psoriasis, myocardial infarction, solid disorders, tumours or Werner syndrome, psoriasis, cancer

SEQ ID ö 313; 32pp; English.

The invention relates to a nucleic acid, which comprises a segment of the C chemically pretreated DNA of genes associated with DNA transcription from CC one of 346 sequences, and an oligomer; in particular an oligomucleotide core peptide nucleic acid (PNA)-oligomer that hybridises to or is identical CC to the chemically pretreated DNA of genes associated with DNA transcription. The set of oligomer probes are useful for detecting the CC cytosine methylation state and/or single nucleic acids are useful for dispersion of the achemically pretreated genomic DNA. The nucleic acids are useful for CC diagnosing or treating diseases associated with DNA transcription CC (particularly with the methylation stateus), e.g. adenosine deaminase CC deficiency, viral infection, retroviral infection, Sezary syndrome, CC (particularly with the methylation status), e.g. adenosine deaminase CC (particularly with the methylation status), e.g. adenosine deaminase CC (particularly with the methylation status), e.g. adenosine deaminase CC (particularly with the methylation, postival infection, Sezary syndrome, CC (particularly with the methylation status), e.g. adenosine deaminase CC (particularly with the methylation, postival disorders, werner syndrome, CC (particularly viral infection, retroviral infection, Sezary syndrome, CC (particularly disorders, immunological disorders, werner syndrome, CC (particularly disorders, postivals, Rieger's syndrome, CC (particularly disorders, postivals, Rieger's syndrome, CC (particularly disorders, manuforgenerative disorders, waardenburg CC (particularly disorders, manuforgenerative disorders, solid tumours concerns sequences ABK28127-ABK28472 represent DNA transcription CC (particularly CC) (particularly form the specific ation but was obtained in electronic format directly from the cCC (particularly format directly from the printed specific ation but was obtained in electronic format directly from the

CO disjoners specific to each of the genes are useful for detecting the CC methylation state of all CpG dinucleorides within the 350 sequences or CC (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, (II) and/or their complements CC as oligomer probes for detecting the cytosine methylation state and/or Sindle nucleotide solvmorphisms (NDPs).
                                                                                                                                                        Query Match

Sequence 2, Application US/08706214

Patent NC. 5770720

GENERAL INFORMATION:
APPLICANT: Deul, Thomas F.
APPLICANT: Shenk, Thomas E.
TITLE OF INVENTION: UBIQUITIN CONJUCATING ENZYMES HAVING
TITLE OF INVENTION: TRANSCRIPTIONAL REPRESSOR ACTIVITY
NUMBER OF SEQUENCES:
ADDRESSEE: Paul A. Stone, Esq.
STATE: Missouri
COITY: St. Louis
STATE: Missouri
                               FILING DATE: 30-AUG-1996
CLASSIFICATION: 536
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 60/018,040
FILING DATE: 21-MAY-1996
PRIOR APPLICATION NUMBER: US 60/002,995
PRILING DATE: 30-AUG-1995
ATTORNSY/AGENT INFORMATION:
NAME: Stone, Paul A.
REGISTRATION NUMBER: J8,628
REFERENCE/DOCKET NUMBER: JWH 10033
TELECOMOUNICATION INFORMATION:
TELEPHONE: (314) 231-5400
TELEPIAX: (314) 231-5400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ZIP: 63102
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/706,214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          имвек: US/08/706,214

Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DHIOB host cells (GibcoBRI). This library was constructed in the laboratory of Dr. Randy Shoemaker."

/note="The library Gm-r1070 is a sequence-driven, reracked
/note="The library Gm-r1070 is a sequence-driven, reracked
/note="The library Gm-r1070 is a sequence-driven, reracked
set of 9,216 clones selected from cDNA libraries from
various tissues and stages of development of soybean that
represent 2,639 sequences from immature cotyledons, 1,770
from immature seed coats, 3,938 from flowers, and 869
from young pods. The 5' ESTs of the source clones from
the different libraries was used to select singletons, or
a representative of each contig, which were reracked to
form library Gm-r1070. The cDNA clones of the reracked
Gm-r1070 library were then sequenced at the 3' end. The
contig analysis to select unique genes was performed by
the laboratory of Ernest Retzel, Center for Computational
Genomics and Bioinformatics, University of Minnesota,
http://www.cbc.umm.edu/ResearchProjects/Soybean/index.html
Reracking was performed by Genome Systems, St. Louis,
http://www.genomesystems.com, and 3' sequencing by the
Keck Center for Comparative and Functional Genomics,
University of Illinois, http://www.life.uiuc.edu/biotech/keck.html. Note: The http://www.life.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Gm-r1070 library is listed in the 'OTHER EST' field. The detainformation on the source library for each clone can be obtained by referring to the Genome Systems clone

EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into XLIO-Gold host cells. This library was constructed by Dr. Randy Shoemaker and Dr. John Erpelding."
